REICHERT
KOMMUNIKATIONSTECHNIK

REICHERT ZBE · ONE SYSTEM EN

One system.
Every function.

Controller, desk units and AfVis as software: radio, telephony and intercom at every position.

AT A GLANCE

One system.
Five building blocks.

The REICHERT ZBE grows with the task: from the small communication unit in the vehicle to the system with numerous operator positions.

BOS-Compact
The controller: up to 6 radios, telephony, documentation and building control, vehicle power 9–36 V.

UniKey-TS3 · TS2
Desk units with 7″ and 4.3″ touch: all radio circuits in parallel, up to 12 audio sources.

AfVis
The workstation as software: on the PC, as an Android app or in the browser, remote via WebRTC, with free seating.

digiRap
Use radios across sites: from system to system over IP, with rights per position.

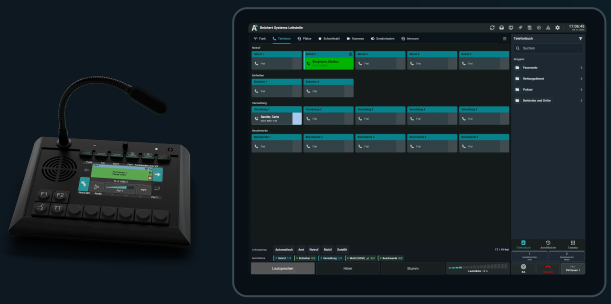

Software workstation
AfVis plus ATL-IP module: one operator position, connected to the BOS-Compact via LAN.

Structure, components and technical data.

COMBINATION · UNIKEY + AFVIS

The desk unit stays.
The big screen comes on top.

AfVis extends the UniKey desk units with additional functions on a monitor of any size. You keep operating radio, PTT and volume on the device – AfVis makes room for everything the display has no space for.

Compact combination: the UniKey-TS2 remains the radio and key unit, AfVis shows telephony by line group.

What the combination adds

More display
Graphical, any size

Camera images
With PTZ control

Voice recording
Better presented

Cell call
With custody log

Central management
All positions in one place

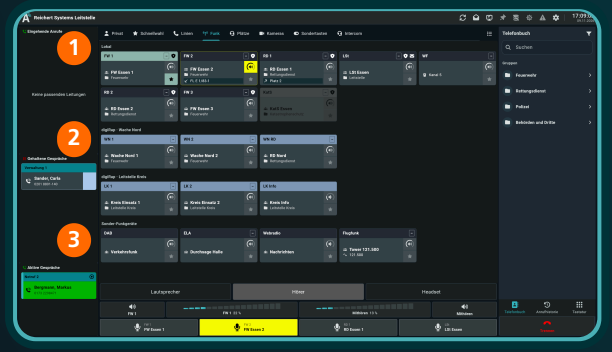

Familiar operation
Keys and knobs on the device

AFVIS + SYSTEM

SOFTWARE · AFVIS

AfVis.
The workstation as software.

Radio, telephony, intercom, camera and special keys on one screen – any size, with touch or mouse.

1. **Local** radios of your own system
2. **digiRap network** radios at other sites
3. **Special radios** special radios, kept separate

Alias groups
Radio lines in separate areas: local, network, special radios

Phone book
Groups and contacts at the desk, LDAP connection

Day and night
Light and dark view

Centrally managed
All workstations in one place

SYSTEM · NETWORK

One system.
Many sites.

All building blocks share one network: radio, telephony and intercom are available at every position – on site and across sites.

Controller
BOS-Compact for radios, telephony and documentation, redundant in a network.

Desk units
UniKey-TS3 and TS2 on the network, powered via PoE or power supply.

Software
AfVis on the PC, tablet or in the browser; with the ATL-IP module as a software workstation.

digiRap: sharing radios

digiRap is software on every REICHERT system from the BOS-Compact upwards and connects the systems over IP, directly from system to system. Remote radios appear on UniKey and in AfVis as perfectly normal tiles. The system controls listening, talking and switching per position and radio line.

Which radio fits?
Radio systems, device families and connection paths online.

digiRap in detail
Network, sharing and rights per position online.
